Experience

- 2016 **Medical Imaging Engineer**, *SickKids Hospital*, Toronto.
- Developed an embedded system for synchronizing MRI acquisition with cardiac motion, using surgically implanted arterial pressure probes. The system facilitated a series of animal experiments involving cardiac and lung imaging.
 - Created a software application that enabled radiologists to perform customized data analysis during MRI clinical trials.
 - Designed a digital filtering module for Doppler ultrasound probes.
 - Built calibration and testing devices for MRI acquisitions.
- 2015 **Software Developer**, *Crowdlab at the University of Waterloo*.
- Developed an EEG analysis software suite used by neurologists for seizure detection and medical research.
 - Built out a complete web application that allowed the lab to crowd-source time consuming data annotation tasks, reducing the process costs by 90%.
- 2013–2014 **Automation Engineer**, *Watrhub*, Toronto.
- Developed and deployed a customized internal system to help research analysts find important documents regarding wastewater treatment systems of major cities.
 - Developed web crawlers to populate the internal system's database.
 - Implemented a machine learning classification system to categorize and sort documents collected for the database.
- 2012–2013 **Test Automation Engineer**, *Canadian Imperial Bank of Commerce*, Toronto.
- Developed tools in python to automate performance testing of cibc.ca
 - Saved test analysts 20 minutes per test by creating a tool that automatically populated the internal performance testing report.

Projects

- 2016–2017 **Skeleprint**, *University of Waterloo*.
- Created a novel 3D printing process for bone graft production.
 - Developed an embedded closed loop controller using an ARM Cortex MCU for the three motion actuators and the pneumatic extrusion system.
 - Created a customized slicing software for printing bone grafts while controlling the microstructure created by the print process.
 - Final functional printer prototype was used biomaterials lab for the development of osteoregenerative bone grafts.
- 2016 **MRI Compatible Blood Pressure Probe Amplifier**, *University of Waterloo*.
- Built a low-cost MRI compatible blood pressure probe amplifier.
 - Provided SickKids hospital with four units, saving them \$26,000.
 - Amplifier worked inside the MRI scanner during operation, where EMI and EMC are fundamental problems.

- 2016 **SMRT WATR Interactive Fountain**, *University of Waterloo*.
- Designed and built a robotic water fountain that was connected to an online quiz game.
 - The fountain had five water jets with two axis of motion and 200 ultra-bright LED pixels that displayed animations under the water.
 - Developed an embedded control system that received instructions over WIFI and actuated all of the motors and lighting.

Education

- 2012–2017 **BASc in Systems Design Engineering**, *University of Waterloo*.
Relevant courses include: Biomedical Measurement and Signal Processing, Optimization and Numerical Methods, Algorithm Design and Analysis, Image Processing, Control Systems and Pattern Recognition

Awards

- 2017 **Baylis Medical Capstone Design Award**.
Large monetary prize granted in recognition of the Skeleprint design project's success
- 2017 **Engineer of the Future Trust**, *University of Waterloo*.
\$4500 in project funding that paid for the materials used in the Skeleprint project.
- 2016 **Third Year Design Symposium Winner**, *uWaterloo Systems Design Eng. Dept.*
Granted in recognition of the MRI compatible blood pressure probe project.
- 2015 **Undergraduate Research Award**, *University of Waterloo*.
Granted in recognition of research accomplishments at SickKids.
- 2015 **Second Year Design Symposium Winner**, *uWaterloo Systems Design Eng. Dept.*
Granted in recognition of the SMRT WATR interactive Fountain.
- 2014 **Engineering Co-op Student of the Year**, *University of Waterloo*.
Only first year student ever to win. Granted in recognition of achievements at Watrhub Inc.
- 2013 **Impact Award**, *Canadian Imperial Bank of Commerce*.
Won a monetary prize as a co-op student that's usually reserved for full time staff. Granted in recognition of improvements made to the performance testing process.
- 2012 **Community Involvement Award**, *Professional Engineers of Ontario*.
Granted in recognition of volunteer music teaching and tutoring.

Hobbies

I make scientific instruments, software and electronic art in my free time.
I'm an ultra-long distance hiker, and I hiked the Pacific Crest Trail in 2017.
I founded my local communities slackline club, which has 40 active members.
I've played the saxophone in a few bands.
